

Q204W: Tin Plating – 09/25/2009

The use of pure unalloyed tin is prohibited in the construction and surface finish of "goods required to be deliverable to Buyer under this Purchase Contract."

Construction and finish include solders and plating. Tin is considered to be pure if it contains greater than 97% tin and less than 3% alloying elements.

The exception to this requirement is "Tin plated copper wire".
